

Test name	Hypertrophic Cardiomyopathy (HCM) - Maine Coon (A31P)
Swab Number	9683
Animal Number	8873

Owner/Breeder	
Name	Shireen Booyse
Address	33 King Street Stawell AUSTRALIA Victoria, 4480.

Animal Details	
Name	Coonhaven Lord Grosvenor
Sex	Male
Breed	Maine Coon
Registration No. ID	11GC28144(slv)
Microchip No.	95600008218719

Specimen Type	BUCCAL CELLS
Date Received	4/24/2013 9:53:16 AM

Test Result	Clear
Interpretation	<p>The specific HCM mutation is not present.</p> <p>This test identifies the most common mutation currently known to cause HCM in Maine Coon cats. It identifies a mutation in the MYBPC3 gene as described by Meurs et al.</p> <p>If the mutation is not present, it does not mean that the cat will never develop HCM, as other causes are possible. A "Clear" result means that the cat's DNA does not contain this specific mutation.</p> <p>In breeds other than Maine Coon, a positive result indicates that the cat has the specific mutation.</p> <p>Reference: Meurs et al. Human Molecular Genetics 2005, 14, 3587</p>

Date of report: 01 May 2013

Authorised by: 

NB: There may be rare instances where the animals colour or pattern in DNA sequence that has not previously been reported.
