Maine coon HCM (hypertrophic cardiomyopathy) test

| | | | |
|---------------------------------|-----------------------------------|------------------------|-------------------------------|
| I. Rybushkina | | | Test number: 30072018-Ryb1 |
| Cattery Akella Leader | DOB 19.05.2018 | Electronic chip | Report date: 01.08.2018 |
| Breed Maine Coon | Cat Platon AkellaLeader | Sex ♂ | |

Result

N/N

Result Codes:

N/N – Cat is homozygous for a normal type (i.e. carry two normal copies of the *MYBPC3* gene).

N/HCMmc – Cat is heterozygous for the mutant allele (one copy of the *MYBPC3* gene carry the A31P mutation).

HCMmc/HCMmc – Cat is homozygous for the A31P mutation (two copies of the *MYBPC3* gene carry the A31P mutation).

This test only detects the A31P mutation associated with HCM in Maine Coon cats and outcrosses as described by Meurs *et al.*, 2005.

The presence or absence of the mutation A31P is not indicate the presence or absence of the disease, but only describes the risk of its development.
